### Just ask me...

*I can tell you how many chickens each coop will hold throughout this catalog. Just look for the chicken and you will see the number on the chicken.*

RECOMMENDED # OF CHICKENS

STYLE & SIZE CODE

## Standard Features

- Paint or Stain
- Keyed Entry Door
- Chicken Door
- Chicken Ramp
- Nesting Boxes
- Roosting Bar
- Vent Lid or Vent
- Window with Screen
- Asphalt Shingles
- Aluminium Drip Edge
- P.T. Plywood Flooring
- P.T. Legs and Runners
- L.P Tech Shield Roof Sheathing

Note: Chicken Coop sizes do not include outside nesting boxes.

# Quaker

The Quaker hen house series has a distinctive roof line overhang that is inspired by century old barn styles. This style maximizes head space in the interior.

## Options for an easy care hen house

Glassboard Floor

Litter Tray  
(not recommended for larger models)

Electrical Package

## Easy Care Tips for healthy and safe chickens:

- Glassboard floor makes clean up a breeze!
- A removable litter tray makes it much easier to keep your chickens cleaner and healthier.
- Adding an electrical package allows for added conveniences such as a heated water bowl to relieve you of the task of changing water several times a day in the freezing winters.
- Automatic doors provide extra safety for your chickens. Nothing is so devastating as having been gone too late in the evening without shutting them up for the night and having a predator ruin your flock.
- Wheels - fertilize your whole yard without sacrificing the grass. Being able to move the chicken house easily keep the grass healthier and provide your chickens fresh scratching areas

Automatic Door  
(Available in Electric or Solar)

### 7x12 Quaker

- With board and batten siding
- 101" high - 4" off ground
- 8 nesting boxes
- Natural stain

# Tips for keeping a successful hen house

## All Year Round!

When keeping chickens through the winter, don't forget that:

- Chickens need extra grain to keep them warm and also to compensate for lack of grass and insects.
- Keeping the coop filled with the recommended amount of chickens helps keep enough to body heat to keep them comfortable.
- Make sure the birds have water ... not ice.

Interior view of Quaker

## Guidelines for housing needs:

- Most coop guides suggest approximately 2 square feet of space per adult bird.
- At a bare minimum, the coop should be easy to clean, well ventilated but draft-free, include clean watering and feeding stations, and offer adequate roosts.
- Good, natural light is a plus.
- Dirt floors can work where the soil is sandy and the drainage reasonable, but a wooden floor is vastly easier to clean and protect. We recommend our Glassboard surface for ease of cleaning.
- Good bedding, such as sawdust (untreated wood only), wood shavings, or chopped straw is ideal.

Interior view of Q34 (page 14)

Chickens make fun pets

# Combination

The Combination series boasts a hen house with an attached chicken run to allow the chickens a safe place to scratch.

## Details that are important for your hen house

Hen Entrance With Latches

Ventilation Door

Nesting Box Lid

## Details - they make a difference

- The right door for the chicken entrance can make the difference! Not only do we see value in a good quality latch for closing it, but also for holding it open!
- One inch by two inch sturdy mesh inside the ventilation door keeps birds, and predators out of the hen house while still allowing extra ventilation for your hens.
- A sturdy and well designed lid for the nesting boxes keeps the lid heavy enough to keep predators out but allowing you to easily remove the eggs.
- Adding wheels to your hen house, allows you to move the hen house and fertilize your whole lawn. Moving them keeps them from getting bored and keeps them on fresh grass.

There are several styles of wheels, including one that allows you to lower the hen house to the ground and then jack it back up to move it. Ask about all our options.

The Wheel Lift Lever is available for 5x7 and 4x6 Combination houses.

### 8x12 Combination

- With Duratemp® siding
- 6' x 8' run area
- 6' x 8' chicken coop area
- 101" high

- 3 nesting boxes
- Light gray siding with white trim
- Weather gray shingles

# Tractor

The Tractor style hen house is a conveniently movable cage and run combo. This allows you to keep the chickens on fresh grass, by easily moving it on to the next spot.

## Tips for Problem Solving in hen house

### Common Problems with backyard chickens, and how to fix them.

- **Hen Pecking**

1. Can be caused by boredom. Add items for distraction: a head of cabbage, greens, or hang a Peck a Block in the run.
2. Overcrowding can cause pecking, keep flock at the recommended size for your house.
3. If one hen seems to be being picked on and blood is being drawn, she must be removed as blood only encourages more pecking. Anti peck products can also be applied to the picked on hen to try to break the habit.

Interior view of Quaker

- **Broody Hens who refuse to leave the nest**

1. Try to break the habit by removing eggs as soon as they are laid.
2. Keep her away from the nesting boxes for approximately a week.
3. Nest inserts can be used which cause eggs to roll away as soon as they are laid.

- **Blocked or Sour Crop**

1. Keep poultry grit readily available at all times to help healthy digestion.
2. Try feeding her some oil and massaging several times a day to loosen blockage.
3. Garlic and natural yogurt can also be tried.

### 3x4 Quaker Tractor

- With board and batten siding
- 70" high - 14" off ground
- 4 nesting boxes
- 2 wheels with wheelbarrow handles
- 4' x 4' run area

# A-Frame

The A-Frame is a classic style favored by many. With simple straight lines and beautiful trim, it has its own touch of class.

## More Tips for Problem Solving in the hen house

Keep chickens safe with a ramp

### • Feeding Incorrectly

1. Table scraps are not a good solution for chickens. They do not provide the necessary diet needed to promote good egg laying and long life.
2. Only feeding on grass will usually also be problematic as necessary nutrition is not received from only grasses. Today's breed of chicken cannot survive on the same diet as chickens from 30 years ago.
3. Make sure wild birds do not have access to your chickens water and feed containers.
4. Chickens need twice as much water as they do feed. If you do not use an automatic waterer, change water daily and make sure there is always plenty available. Lack of sufficient water will take large tolls on the health of a chicken very quickly as they need water to digest food properly.

### More Common Problems with backyard chickens, and how to fix them.

#### • External Parasites (ticks, mites etc)

1. Most are successfully treated with products available from your local rural merchandiser and you should routinely treat the chickens every 2 or 3 months.

#### • Red Mites

2. Chickens infested with red mites will stop or slow down laying eggs, hesitate to roost in normal area, and may become anemic.
3. Take a white tissue and wipe along the underside of perches at night when birds are roosting. Look for tell tale blood smears.
4. Check often as they multiply quickly and are hard to get rid of if caught after they become very evident.
5. For best results treat several times in the course of several weeks to get total control over the situation with a combination of wet and dry solutions.

A chicken house with wiring allows for automatic waterers and lights.

### 8x10 A-Frame

- With Duratemp® siding

# Dutch

The Dutch Hen House boasts a quaint hip roof; making it look like a miniature barn. The hip roof optimizes usable interior space.

## Chicken Breeds to Consider for Your hen house

1. Rhode Island Red  
Great layer of brown eggs. Good looking chicken. Good disposition.

2. Buff Orpington  
Fat yellow chicken which lays brown eggs. Very docile.

3. Barred Rock  
Interesting black and white striped pattern. Decent layer of brown eggs and good disposition.

4. Ameraucana  
Fuzzy face, large chicken. Lays blue eggs! Good disposition, generally friendly.

5. White Leghorn  
Prolific white egg layer. Nervous and flighty, not as docile.

# Lean-To

The Lean -To is a lovely little space saver. It is designed to allow you to set it against a building or wall. Find the size that is right for you.

## Predators of the hen house

### Predators and how they kill

- **Raccoons**

Raccoons prey on chickens night and sometimes day. They can reach through wire and will often pull the chickens head or legs off, through the wire. They also can tunnel under runs without wire flooring. Easy latches can be opened by Raccoons.

- **Dogs**

Most dogs are natural predators and will find chickens very hard to resist. Even family pets unless trained, will be tempted by your chickens. Most dogs will eat the chicken, leaving only feathers. Dogs can be trained to let them alone or even guard them. Some dogs will only chase or 'play' with them but the trauma can keep the hen from laying eggs for months.

- **Skunks**

Skunks tend to eat the eggs more than kill adult poultry but they have been known to do that occasionally also. Eggs will usually be crushed inwardly and chickens will have the head removed as the skunk wants to drink the blood.

- **Hawks**

Hawks will kill adult chickens if they are outside without the protection of a cage with a wired roof. Prey is killed with talons and torn into bite size pieces with the beak.

- **Snakes**

Venomous snakes can kill full size hens but most snakes will go for the eggs. Keep the hen house secure with no cracks or holes. Keep tall grass cut and do not have your hen house close to compost piles or piles of logs or rocks, as these are snakes favorite hideouts.

- **Cats**

Cats (even domestic pets) enjoy the thrill of the hunt and can prey on small chickens and chicks. They can be trained to see them as fellow pets however. Metal mesh, barbed wire picket fence and tall hedges with thick lower growth can deter them.

- **Opossum**

Opossum will eat the chicken feed, eggs, chicks and will attack chickens. Keep a strong cage and your chickens penned at night.

- **Bob Cat, Coyotes, Fox**

All of these enjoy eating chicken. Secure your chickens at dusk in a tight and strong hen house to deter them. Large breed dogs are good to dissuade the animals from the property or at least to alert you to their presence

- **Other predators**

rats, mice, owl, crow, squirrel, Fisher cat, bear, mice, mink, weasel, lice, mites

### 4x5 Lean-To

- With board and batten siding
- 82" high - 14" off ground
- 4 nesting boxes
- Natural Stain
- Cedar shingles

### 3x5 Lean-To

- With Duratemp® siding
- 65" high - 12" off ground
