

Pueblan Milk Snake

Lampropeltis t. campbelli

Distribution: Central Mexico

Size: 2.5' - 3'

Natural habitat This milk snake inhabits arid high desert habitats of Central Mexico. When captive, adults require a 20 gallon enclosure.

Behavior: Most will become tame with regular handling. This species is nocturnal (active primarily at night). Provide some areas of darkness for hiding.

Captive environment: Use full spectrum lighting 12-14 hours per day. Provide a basking area with access to a cooler zone. Provide several climbing areas on branches, logs, & plants.

Temperature: Day temperature should be gradient from 78 to 90 degrees F. Maintain night temperature range between 70-75 degrees F. Use reptile heating pads under tank for 24-hour heat.

Humidity: This species requires low to moderate levels of humidity.

Water requirements: Provide a large fairly deep bowl for drinking and soaking.

Nutritional requirements: This species is a carnivore (meat eater). Feed appropriate sized rodents (mice, hamsters, rats). Eats lizards, and snakes.
